Personal tracking & duress system

- **PANIC BUTTON**
- **EMERGENCY ALERTS**
- **TRACKING MODE**
- **AUTO SOS**
- **ELECTRONIC FENCE**
- **GPS & GSM TRIANGULATION**

## Introduction

In today's society many people live, work, or travel alone. And unfortunately the world is not always a safe place.

MySpot SOS is a personal tracking and duress system designed to provide a safety net for individuals.

Using the mobile phone you already carry, the latest technology that incorporates GPS, a powerful collection of backend IT systems, and a simple Web interface – this is technology working for you.

Sometimes you may just want to register some information about where you are, without the need to contact anyone; other times you can find yourself in an emergency and need to send an SOS for help. Or maybe you are going into an unknown situation and wish for an automatic SOS to be sent if you don't return at a specified time.

MySpot SOS provides for these situations and more:

- Take advantage of the mobile phone you already have to provide a safety net
- Employers can fulfil their duty of care to employees working alone
- Complete control of all functions from mobile phone or Website
- Additionally by using the MySpot system you also have access to fleet and asset tracking options

**“MySpot SOS turns your mobile phone into a tracking and duress alarm system”**

## Key Features

### Mobile Phone Features

---

SOS Button	– dedicated or programmed
